

Bobet Sharp-Easy

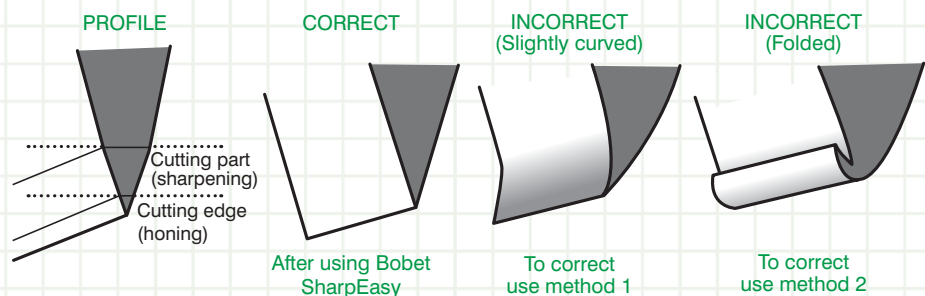

Automatic Knife Sharpener

This useful tool is used to keep any sharp knife sharp. It does this by automatically reforming the cutting edge. Even beginners can achieve the needed results.

During normal use, the cutting edge is dulled by the cutting edge being rolled over through contact with hard materials such as bone and cutting blocks.

The Bobet Sharp-Easy tool realigns the cutting edge of the knife, and by means of V-shaped tongues at the base of the guides, may even restore more extensive damage to keep the knife useable until the next sharpening.

Using the Bobet Sharp-Easy

Method 1 - Honing during daily knife use.

Place the blade of the knife between the knife guides right up to the handle and press down only so far as causes the pretensioned sharpening bars to operate - without reaching the V-shaped tongues at the bottom of the guides. Repeat several times.

Removal of burrs after sharpening

This is done using the same technique as for honing.

Method 2 - More extensively damaged edge.

Insert the blade as described for Method 1, but press down until the blade engages with the V-shaped tongues right at the bottom of the guides. Applying gentle downward pressure, smoothly draw the knife toward you until the whole knife edge has been straightened. Repeat several times as necessary.

Checking knife wear

Insert the tip of the blade into the notch. If the tip reaches the back of the notch, the knife is no longer safe to use and should be replaced.

Maintenance

The stainless steel pretensioned sharpening bars have been specially treated for long life and minimal maintenance cost. If necessary, they can be replaced without tools. After carefully noting the relative positions, simply ease them from their pivot points, then insert the replacements in the reverse order.

CODE	DESCRIPTION	PACK SIZE	PRICE
1900	Bobet SharpEasy Automatic Steel	1	Each
994016A	Replacement Sharpening Bar for 1900 (2 needed per machine)	1	Each
